ABOUT US

Luxa Interiors, founded in 2024, is a manufacturer of specially designed counter displays for luxury stores, especially jewellery stores.

Specializing in luxury retail, especially for jewelry stores, we create spaces that influence and enhance the brand experience.

Our experienced architectural team specializes in creating and managing comprehensive retail projects. We produce high-quality furniture using premium materials, ensuring durability and elegance. We also offer lighting design support through our team of talented lighting engineers, collaborating on innovative projects and overseeing production to achieve exceptional results.

DESIGN PROCESS

5

Preparation of layout plans based on
store dimensions.

Selection of materials and preparation of a sample board for the client.

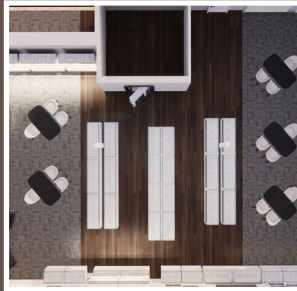

Creation of store drawings and production of renderings.

OUR SERVICES

Initial Consultation

Meeting with the client to discuss their vision and requirements.

Design Development

Creating design concepts by our experienced architectural team.

Site Survey

Conducting site measurements and evaluations as needed.

Client Meetings

Presenting designs to the client for feedback and adjustments.

Detailed Drawings

Preparing comprehensive drawings based on the finalized design.

Production Phase

Commencing the manufacturing process of the approved designs.

Installation

Coordinating logistics and overseeing the installation at the site.

Loading & Delivery

Coordinating logistics and overseeing the installation at the site.

PROJECTS

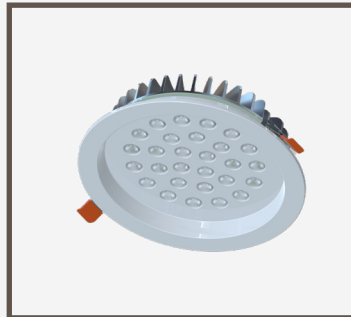

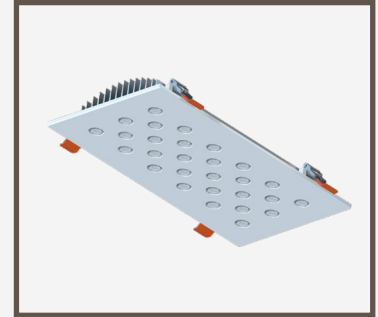

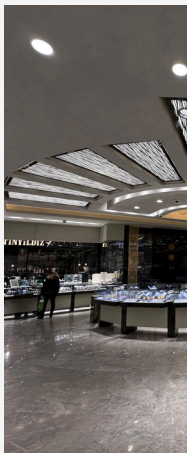

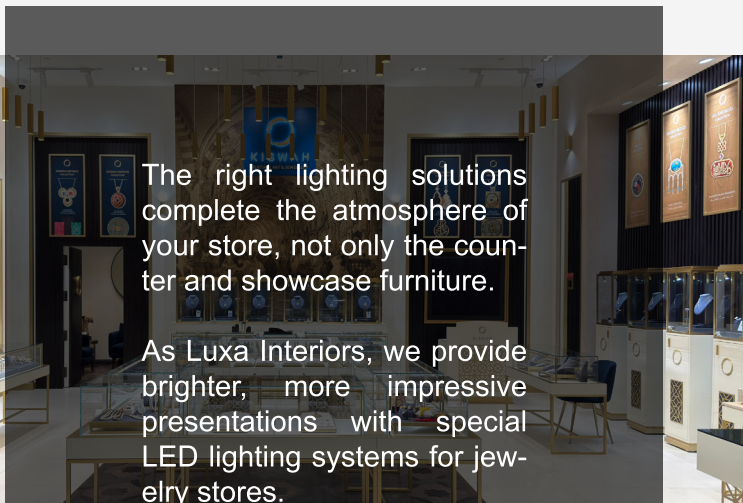

LED LIGHTING

The lighting used in the image are LED systems designed by **Meraled Lighting** specifically for Luxa Interiors furniture.

What is Flicker in LED Lights ?

LED lights can produce an invisible flicker caused by rapid fluctuations in brightness. While this flicker is typically not visible to the naked eye, it can lead to discomfort such as eye strain, headaches, and difficulty concentrating. In some cases, invisible flicker may become noticeable, particularly if you observe streaks in moving objects or vertical lines in photos, indicating that the light source may be flickering.

Color Temperature

Color temperature measures the color of light in Kelvin (K). Lower temperatures (3000 K) produce a warm, yellowish light, while higher temperatures (5000-6500 K) emit a cool, bluish-white light. **Importance of Color Temperature for Jewelry Store Lighting:**

Showcasing True Colors: The right color temperature helps accurately present the colors and brilliance of jewelry. Cool white light (around 5000K–6500K) mimics daylight, which enhances the sparkle of diamonds and brings out the true colors of gemstones.

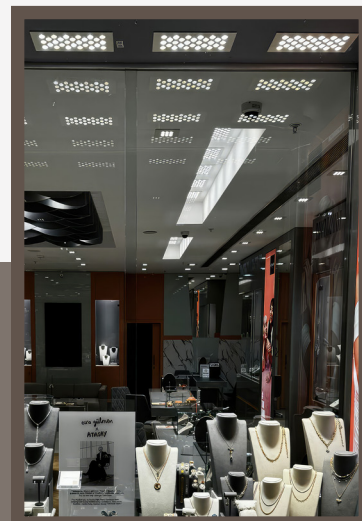

The Effect of Bright Luminaires

Bright luminaires can cause glare, making the lighting less comfortable. Anti-glare LED lights offer a more pleasant and effective lighting experience. When the lens is positioned too close to the surface, the light becomes scattered throughout the room instead of being focused on the products, reducing the effectiveness of the lighting.

Anti-Glare Led Luminaires

The light source is positioned behind the luminaire, allowing for better focus on the products and ensuring the light illuminates specific areas without scattering. This design provides comfortable lighting with minimal reflection in the store environment. An "Anti-Reflection" option is available as an additional feature across all our products. Contact us for more information on low-reflection lighting solutions.

JEWELRY DISPLAY

With our dedicated and skilled product team, we offer unique solutions tailored to the needs of the jewelry industry. We create innovative and imaginative designs for the USA, Asian, and European markets. Our commitment to quality and reliability earns us the trust and appreciation of our clients by delivering customized products that perfectly match their store requirements.

**Designer, manufacturer and service
provider in the USA, Europe and the Middle East.**
